
ıre 3: *The dynamics of overdense spheres with $\rho = 0$ in the expanding verse. The larger the initial overdensity, the earlier the sphere's expansion . Systems which are already virialized must have $\rho/\rho_{\rm crit} \geq 200$; those h are now infalling must have $\rho/\rho_{\rm crit} \geq 5$. Note that the overdensity factor ound or collapsing systems must be even larger in a universe with $\Omega < 1$*
